

R B Snook Environmental Policy

R B Snook Building Ltd aspires to act responsibly in minimising the impact of our activities on the environment both on site, and within the offices and retail operations of our sister company; Sturminster Newton Building Supplies.

We are currently working towards adapting our normal business activities, to strive towards a 'greener' agenda which addresses sustainability issues.

We actively promote our 'green' aspirations both within the company and with customers, subcontractors and suppliers. Part of our plan to do this, is to source alternative products and materials, with reduced environmental impacts whenever these can be commercially justified. This plan includes the wish to use timber from well managed renewable sources.

We separate waste for recycling or refuse, and we ensure that the company utilises energy to achieve maximum productivity with minimum waste, on site, in the offices and within the retail sector of the business.

R B Snook Building Ltd minimises the risk of pollution on site by adopting the requirements of the Environment Agency Pollution Prevention Guidelines 6 "working at Construction and Demolition sites" as a minimum standard for all of our sites.

Further to this, we recognise the effects that noise, odours, dust, litter and transportation can have on the communities within which we work, and we constantly strive to minimise the impact that they can collectively contribute to.

Assessment is ongoing and our workforce is fully aware of the part they play in supporting R B Snook Building Ltd to actively promote our environmental policy.
